BILLION

PENETRATION:  
**66%**

ACTIVE MOBILE  
SOCIAL USERS

**2.549**  
BILLION

PENETRATION:  
**34%**

# Objective

- Present the main research problems related to Sentiment Analysis (SA) and some of the techniques used to solve them
- Review some of the major application areas where sentiment analysis is being used today

# Focus

Sentiment Lexicon

Acquisition

# SA – Document Level

- Assumed that the document contains an opinion on one main object expressed by the author of the document
- Two main approaches
  - Supervised learning
  - Unsupervised learning

# SA – Document Level

- Supervised learning
  - Finite set of classes
  - Training data is available
  - Classes
    - Positive/negative/neutral
    - Numeric scale (stars)
  - SVM, KNN, Naïve Bayes, Logistic Regression, Genetic programming

# SA – Document Level

# SA – Document Level

- Important representations
  - Bag of words
  - TFIDF
  - Part of Speech (PoS)
  - Sentiment Lexicons

# SA – Document Level

- Unsupervised learning
  - Semantic orientation (SO) specific phrases
  - PMI (Pointwise Mutual Information) of the phrase with two sentiment words
  - $PMI(P, W)$ 
    - Statistical dependence between phrase P and word W based on their co-occurrence in a corpus

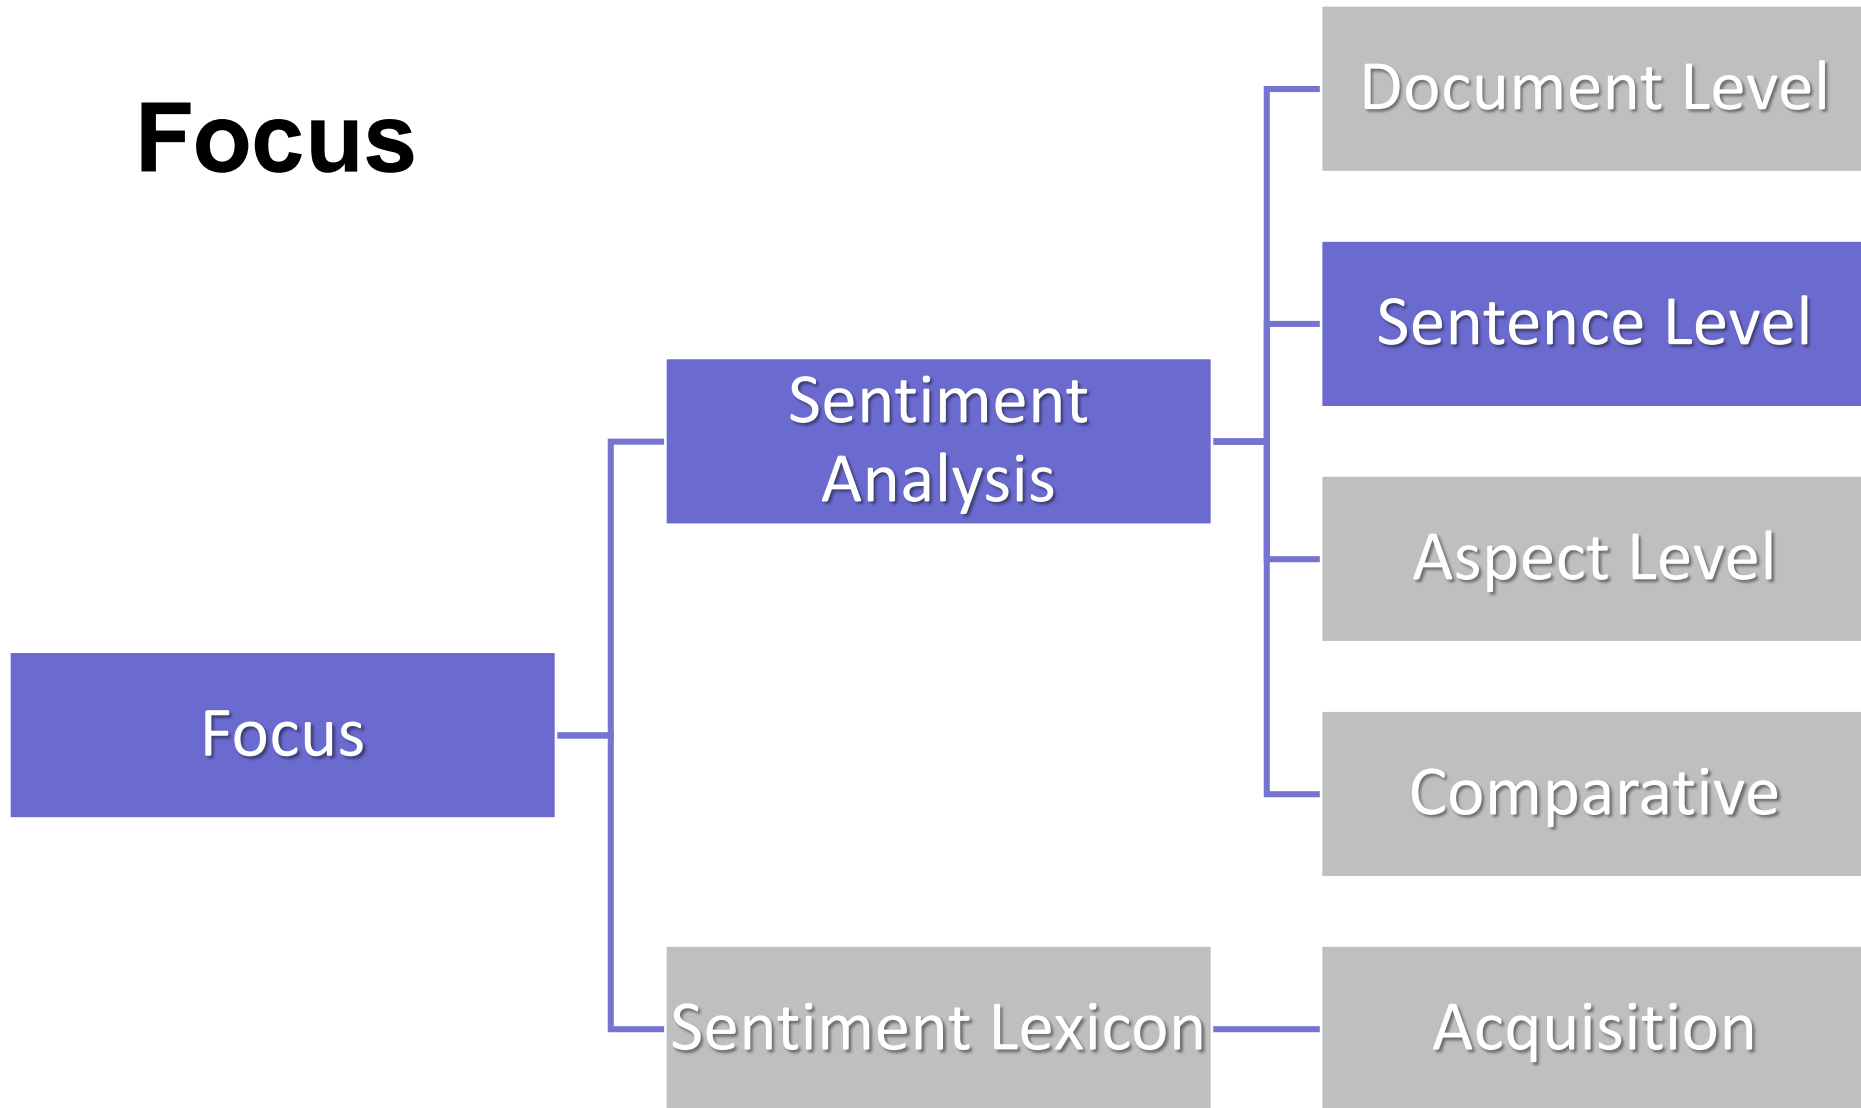

# SA – Document Level

- Unsupervised learning
  - The two words used in Turney (2002) are ‘excellent’ and ‘poor’
  - The SO measures whether P is closer in meaning to the positive word (‘excellent’) or the negative word (‘poor’)

# Focus

# SA – Sentence Level

- Assume
  - We know the identity of the entity discussed in the sentence
  - There is a single opinion in each sentence

# SA – Sentence Level

- Before analyzing the polarity of the sentences we must determine if the sentences are subjective or objective
  - Only subjective sentences will be analyzed

# SA – Sentence Level

- Most approaches are based on supervised learning
- Unsupervised approach is similar of Turney (2002)

# SA – Sentence Level

- Handle different types of sentences by different strategies
- Sentences that need unique strategies
  - Conditional
  - Question
  - Sarcastic

# Focus

# SA – Aspect Level

- In many cases, people talk about entities that have many aspects (attributes) and they have a **different opinion about each of the aspects**
- Often happens in reviews about products or in discussion forums

# SA – Aspect Level

★★★★☆ I want to love it, I really do. But I can't.

By [waetherman](#) on November 15, 2011

**Verified Purchase**

*“As a long-time Kindle fan I was eager to get my hands on a Fire. There are some great aspects; the device is quick and for the most part dead-simple to use. The screen is fantastic with good brightness and excellent color, and a very wide viewing angle. But there are some downsides too; the small bezel size makes holding it without inadvertent page-turns difficult, the lack of buttons makes controls harder, the accessible storage memory is limited to just 5GB.”*

# SA – Aspect Level

*“As a long-time Kindle fan I was eager to get my hands on a Fire. There are some great aspects; the **device** is **quick** and for the most part **dead-simple to use**. The **screen** is **fantastic** with **good brightness** and **excellent color**, and a very **wide viewing angle**. But there are some downsides too; the **small bezel** size makes **holding** it without inadvertent page-turns **difficult**, the lack of **buttons** makes **controls harder**, the accessible **storage memory** is **limited** to just 5GB.”*

# SA – Aspect Level

- Can view the problem of aspect identification as an information extraction problem
  - Use a tagged corpus to train a sequence classifier such as a Conditional Random Field (CRF)
- Implicit aspects

# Focus

# SA – Comparative

- In many cases users do not provide a direct opinion about one product but instead provide comparable opinions
- The goal of SA in this case is to identify the sentences that contain comparative opinions, and to extract the preferred entity(-ies) in each opinion.

# SA – Comparative

- Comparative adjectives adverbs
  - ‘more,’ ‘less,’ and words ending with –er (for example, ‘lighter’)
- Superlative adjectives and adverbs
  - ‘most,’ ‘least,’ and words ending with –est (for example, ‘finest’)
- Additional phrases
  - ‘favor,’ ‘exceed,’ ‘outperform,’ ‘prefer,’ ‘than,’ ‘superior,’ ‘inferior,’ ‘number one’

Moody's Investors Service has downgraded Chesapeake Energy Corp.'s (NYSE: CHK) rating outlook from stable to negative, citing the company's spending funding gap and CEO Aubrey McClendon's potential effect on the oil and gas driller's business prospects. Moody's said Wednesday it also downgraded the ratings outlooks for Chesapeake Midstream Partners LP (NYSE: CHKM) and Chesapeake Oilfield Operating LLC from stable to negative. The downgrades are due to Chesapeake's first quarter results, which indicate a larger spending funding gap for 2012 because of lower natural gas prices and increased

# Research Issues

- Automatic entity resolution
- Sarcasm
- Noisy texts
- Sentiment to objective statements

# Conclusion

- Reviewed some of the main research problems within the field of SA
- Discussed ways to solve each of these problems
- Described some of the major applications
- Provided a few major open challenges

# Introduction

*“The king suite was spacious, clean, and well appointed. The reception staff, bellmen, and housekeeping were very helpful. Requests for extras from the maid were always provided. The heating and air conditioning functioned well; this was good as the weather was variable. The sofa bed was the best I’ve ever experienced. The king size bed was very comfortable. The building and rooms are very well soundproofed. The neighborhood is the best for shopping, restaurants, and access to subway. Only “complaint” has to do with high-speed Internet access. It’s only available on floors 8–12.”*
